

NEW: FleetBoard Trailer Management. The whole fleet at a glance.

Two new FleetBoard trailer services connect truck and trailer data in the FleetBoard cockpit for the first time. This gives you a holistic overview and enables complete transparency of your fleet.

Trailer Data and Trailer ID allow improved planning for your fleet by connecting all current and past information with each other and displaying them in the FleetBoard cockpit. You not only benefit from our two individual services customised to your needs but also from the strength of our joint partners.

Cooling information and display of the cold chain in Trailer Data

Trailer Data.

All data about your trailer.

With Trailer Data, varied information on the trailer is displayed in the FleetBoard cockpit. This includes status messages, technical condition and cooling information. In connection with FleetBoard Mapping you know at any time where your trailers are and have been. For the use of Trailer Data an additional contract with one of our joint partners is required.

Trailer ID.

Unique and only at FleetBoard.

For the latest generation of Mercedes-Benz Commercial Vehicles, FleetBoard offers a unique service in the market. The truck identifies which trailer is coupled and the coupling status of the trailer, as well as its current and past locations, is displayed. The use of Trailer ID does not require further investment in a pre-installation.

Advantages

- Overview on current truck and trailer data incl. status message
- Retrieval of technical information on the condition of the trailer
- Information on cooling system and display of cooling chain
- Location history in FleetBoard Mapping

Advantages

- Identification of trailers
- Display of the current coupling status
- Tracking in FleetBoard Mapping

Trailer Data in cooperation with
